

Home Page

Shodogg's app enables any type of smartphone to wirelessly send any streaming content to any web-enabled device, including computers, laptops, tablets and smart TVs. It does not require boxes or wires and is free to the user.

With our simple interface, users can now easily access and view video on any second, web-enabled device. They can search YouTube for their favorite videos, browse Shodogg's numerous channels and share customized video playlists with friends.

Dogg-Ear™

Control all of your videos from your smartphone! Shodogg's "dogg ear" overlay allows users to play and pause videos, create and share playlists and easily sync their smartphone with any web-enabled device.

Basic controls such as play, pause and fast forward are customizable to work with any type of app or specific media player.

With Shodogg's Device Manager, it only takes seconds to sync up any smartphone to any web-enabled device. Simply enter the self-generated eight-digit code, name the device and voila...your device is now Shodogg enabled!

Fetch. Toss. Share.™

Shodogg's "Fetch. Toss. Share." system allows users to easily move content between their devices, enabling them to watch streaming videos wherever and whenever they want!

When users **Fetch** any streaming video to any smartphone, content owners retain control. When users **Toss** (direct) a stream to play on their desired device, content files still don't move, staying secure on the original source server.

When users **Share** favorites, Shodogg respects intended ads and branding, and offers customized branded experiences to the second screen.

With Shodogg, you can easily move video between any of your web-enabled devices. You can easily toss videos from your smartphone to a computer, laptop, tablet or web-enabled television. Plus, you can continue your video right where you left off!

Fetch videos from any second connected screen back to your smartphone.

Toss videos from your phone to any second, web-enabled device.

Share. Shodogg makes it easy to share your video playlists with friends via email, Facebook and Twitter.
