aicas ships its 400,000th JamaicaCAR unit for the automotive infotainment market

Design East, Boston, Massachusetts - Monday September 17, 2012

aicas GmbH and aicas incorporated proudly announce reaching the 400,000th unit shipping milestone since JamaicaCAR was released fall of 2011. JamaicaCAR powers the Toyota Entune and Stop & Go applet environment for the Camry and Prius model lines.

Dr. Fridtjof B. Siebert, CTO of aicas, said "We are very encouraged by the success of JamaicaCAR to date. It has exceeded our expectations and we are pleased with its rapid adoption in the automotive infotainment market."

About aicas

aicas produces Java development and analysis tools for realtime and embedded systems. Headquartered in Karlsruhe, Germany, the firm has been serving the marketplace since 2001. The aicas group provides products and services for the military/aerospace, industrial automation, automotive, robotics, medical devices, consumer POS, financial, and general embedded computing markets.

JamaicaCAR is a secure, managed, downloadable, applet environment for automotive infotainment systems, built upon JamaicaVM. JamaicaVM, the flagship product of aicas, is a hard realtime runtime environment incorporating leading edge deterministic garbage collection for running realtime Java programs using the Real-Time Specification for Java (RTSJ) extensions and standard Java classes. JamaicaVM is available for 32bit and 64bit CPU architectures and for singlecore and multicore systems.
