Ascom Launches World's Most Versatile Platform For Mobile Network Benchmarking

TEMS Symphony offers all-in-one, go anywhere benchmarking solution that reduces mobile operators' total cost of ownership

Reston, Va., 8 February 2011 — [Ascom Network Testing](#) announced today the commercial availability of [TEMS Symphony](#), a next-generation mobile network benchmarking product, that provides mobile operators with a single, powerful solution for addressing all of their benchmarking needs, including vehicular, indoor, stationary, and nomadic testing.

[TEMS Symphony](#) sets a new standard for both processing power and channel capacity, with the ability to scale up to 16 processors and 24 channels per system. Using TEMS Symphony, wireless operators can benchmark the quality of service (QoS) of their networks against competitors, regardless of environment, and over the widest possible number of devices, wireless carriers, and network technologies – including LTE. With this adaptability, TEMS Symphony customers can realize a lasting return on investment as the solution grows to meet their evolving network and business needs.

“The rapid adoption of smartphones and the dramatic growth in mobile data usage are driving higher subscriber expectations on network quality and performance, making it more important than ever for operators to understand how they compare to the competition.” said Erik Tarnvik, Vice President Marketing, Ascom Network Testing. “However, using separate benchmarking products to test different wireless environments is no longer necessary. At last, mobile operators can say goodbye to the costly duplication of benchmarking tools with a single, portable, future-proof solution they can use to test anytime, anywhere.”

[Mobile World Congress](#) attendees can preview the new [TEMS Symphony](#) at Booth 1C09, between February 14-17, in Barcelona, Spain.

ABOUT ASCOM

Ascom is an international solution provider with comprehensive technological know-how in Mission-Critical Communication. The company concentrates on core areas such as Wireless Solutions (high-value, customer-specific on-site communications solutions), Network Testing (a global market leader in testing, monitoring, and optimization solutions for mobile networks) and Security Communication (applications for security, communication and control systems for infrastructure operators, public security institutions and the army). The company has subsidiaries in 20 countries and a workforce of about 2,300 employees worldwide. Ascom registered shares (symbol ASCN) are listed on the SIX Swiss Exchange in Zurich.
