FOR IMMEDIATE RELEASE

Vital Images, Inc. Receives 510(k) Clearance for Three-Dimensional Viewing Through its Universal Viewer, VitreaViewTM

The Company Simultaneously Releases Availability of VitreaView for Tablets

Minneapolis, November 14, 2012 — Vital Images, Inc., a Toshiba Medical Systems Group Company and leading provider of advanced visualization and analysis solutions for healthcare providers, received 510(k) clearance from the U.S. Food and Drug Administration for three-dimensional viewing through its universal viewer, VitreaViewTM. The Company also released tablet viewing capabilities for VitreaView.

Introduced in June of 2011, VitreaView provides a consistent image viewing experience across the patient continuum of care. VitreaView is used as a communication tool for DICOM and non-DICOM medical images through a standardized viewer, giving clinicians access to these images through a variety of systems, including EMR, EHR or HIE.

"Delivering high quality products is fundamentally important to Vital; seeking FDA clearance is just a part of our standard process," said Erkan Akyuz, president and chief executive officer at Vital Images, Inc. "It is critical that our customers have confidence in the tools they depend on for delivering care. Now with 3D and tablet capabilities available via VitreaView, our customers, particularly referring physicians and clinicians, have more functionality and easier access to the tools they need. Also, with access to images through the EMR as part of the Stage 2 Meaningful Use criteria, VitreaView integrated with a certified EMR enables the ability to meet this objective, with a toolset and infrastructure that also meets the needs of clinical users and IT administrators."

VitreaView enables flexible deployment options, including leveraging virtualized environments and allowing access to multiple databases, thus providing a universal imaging layer at the enterprise level. VitreaView is also designed to eliminate the need to integrate disparate image viewing portals by providing a single, standardized imaging layer for referring clinicians. This allows administrators to move away from managing disparate departmental imaging solutions and provide access through a consolidated universal viewer.

About Vital Images, Inc.

Vital Images, Inc., a Toshiba Medical Systems Group Company, is a leading provider of advanced visualization and analysis software for physicians and healthcare specialists. The company's software provides users productivity and communication tools to improve patient care that can be accessed throughout the enterprise anytime, anywhere via the Web.
