## NEW VISION OF ARCHITECTURE

Russian company "Arbat triangle" presents for journalists, participants and guests of the MIPIM 2013 architectural solution by Alexander Createric. The presented solution – it's the answer to a question, how, on the small space of land in the big city construct apartment house with a possibility when all apartments, and not only penthouses, can have a big and private terraces, which can be a substitute to garden and lawn of a country house.

Innovation of solution is the original algorithm of mutual disposition of apartments, terraces and windows of the house, based on rotation principle, thanks to this algorithm, terraces of apartments are located directly one above the other they are located through the one floor of building, all terraces private and not visible to neighbors, large and spacious, with a ceilings height over 5 meters, and in order to preserve the efficiency and cost-effectiveness of the construction of the apartments the ceiling height is traditional. This solution is working for a lot of type of buildings, and can be easily adapted for the local architectural style.

Apartment houses, which build with this architectural solution, can not only improve ecology in the big cities, they can change rhythm and style of the lives of millions of peoples, give them back daily contact with nature. And to take a breath of air with a young child in a safety, to make a barbecue with friends or dive into a green, blooming and calming world, will no need to spend extra money for a country house and stand idle in a traffic jams, will need just open the door and enter the eco-terrace.

For developers, construction companies and investors available of acquisition the rights to revise and change the architectural works of author and the use of its architectural solutions for the construction of concrete objects, acquisition exclusivity rights to use architectural solutions of author in a specific country or region for a period till 25 years or acquisition of a share in the income from the sale's copyright to the submitted works of architecture in the territory of one or more the countries participating in the Berne Convention for the Protection of Literary and Artistic Works, for a period till 15 years.

More information, description of the architectural solution and examples of buildings can be found on a website **www.ecoterrause.com**
