

Matrox Announces Support for Telestream Wirecast 4.2 for Windows with Entire Line of Matrox MXO2 Capture Devices

Amsterdam — Sept 6, 2012 — Matrox today announced support for Telestream Wirecast Pro 4.2 for Windows across the entire line of Matrox® MXO2™ capture devices. Matrox MXO2 devices are the ideal portable capture solutions for streaming live events from wherever they are happening. News, sports, concerts, educational seminars, religious services, and corporate meetings are just a few of the many types of live events where an MXO2 device comes in handy for creating internet broadcasts. Their convenient form factors let users stream from anywhere there is an internet connection – in studio, on set, in the field, and in OB vans. Matrox MXO2 devices not only send a video feed to Wirecast Pro for streaming, they simultaneously create a high-quality recording of the original video and audio feed on disk – ready for post-event editing.

“Matrox is the first company to use the newly released Wirecast source SDK to provide tightly integrated support of Wirecast with their capture devices,” said Barbara DeHart, vice president of marketing at Telestream. “The result is a highly reliable and robust streaming solution at a very affordable price.”

“Wirecast users are sure to find the exact digital and analog video and audio connectivity they need in the versatile MXO2 product line,” said Wayne Andrews, product manager at Matrox. “They will also appreciate that they can connect any MXO2 device to a computer via PCIe, ExpressCard/34, or Thunderbolt.”

Matrox MXO2 devices will be demonstrated at IBC 2012 on stand 7.B29. Wirecast will be demonstrated on the Telestream stand 7.D16.

Price & Availability

Starting at \$449 US (€382, £338) not including local taxes and delivery, Matrox MXO2 devices are available through a worldwide network of authorized dealers. Support for Wirecast 4.2 for Windows will be part of Matrox driver release 7.2 which will be available to registered users as a free download from the Matrox website in November 2012.

About Matrox

Matrox Video Products Group is a technology and market leader in the field of HD and SD digital video hardware and software for accelerated H.264 encoding, realtime editing, audio/video input/output, streaming, A/V signal conversion, capture/playout servers, channel-in-a box systems, and CGs. Matrox’s Emmy award-winning technology powers a full range of multi-screen content creation and delivery platforms used by broadcasters, telcos, cable operators, post-production facilities, videographers, and A/V professionals worldwide. Founded in 1976, Matrox is a privately held company headquartered in Montreal, Canada. For more information visit www.matrox.com/video.
